NOTE:

- ▼ The company Inles does not provide a warranty for oiled surface treatment. To ensure adequate protection and durability, the surface must be re-oiled at least twice a year with a suitable oil, which you can purchase from us.
- ▼ RL GÖI Brushing is carried out exclusively on flat surfaces level with the window face – this includes smooth parts of windows and trim. Brushing is not possible on infills, wooden shutters, or decorative trims for renovation windows.
- ✱ COLORS RF/K 15, RF/K 16, RF/K 17, RF/K 26 and RK 1, RK 2, RK 4
This shade strongly emphasizes the wood grain and is therefore more sensitive to possible color deviations, different hues and staining, which can occur due to different wood structures, restored resin bales and other manufacturing-related characteristics. Wood is a natural product, so after such a surface treatment with a more pigmented primer, the different absorption of the wood due to its unique shape and structure creates a playful combination of colours. This does not mean a reduction in the quality of the natural product wood nor that such colour differences can be a reason for a complaint about wood products.
- ✱ These colors apply to wood/aluminum programs and wooden entrance doors. They do not apply to wooden windows and shutters!
